

About the Research Programme

The Department of Mechatronics Engineering established an efficient research centre in 2024, operating under Anna University with reference number 4270818. Mechatronics engineering is a multidisciplinary domain that integrates concepts from mechanical engineering, electrical engineering, computer science, and control engineering to develop, fabricate, and sustain intelligent systems and products. A mechatronics engineering research programme often seeks to enhance understanding and technology in the regions where these fields overlap, promoting advancements that can result in more intelligent, efficient, and adaptable systems.
